

RENEWABLE VERSUS

NON-RENEWABLE ENERGY

Energy is all around us in nature. Some sources of energy will never run out so that energy is known as renewable energy. Other sources of energy are available in specific amounts and will not regenerate, so they make non-renewable energy; it is energy from a source that will run out.

RENEWABLE ENERGY

BIOMASS, WIND, WATER, GEOTHERMAL, SOLAR

Efforts are being made today to use more of these energy sources which are sometimes called “green energy” sources.

NON-RENEWABLE ENERGY

COAL, NATURAL GAS, PETROLEUM (OR CRUDE OIL), PROPANE, URANIUM

Coal, petroleum, natural gas and propane are known as fossil fuels because of the way they were formed.
